

University Club Management App - Flutter Mobile Application

Overview

University Club Management App is a Flutter-based mobile application designed to bridge the gap between students and university clubs, societies, and organizations. The main purpose of the application is to provide a centralized platform where students can easily discover, explore, and participate in club events, workshops, hackathons, and activities according to their interests, skills, and availability. The application aims to make campus engagement more accessible, organized, and engaging while helping clubs efficiently manage their events and activities.

Purpose

The application provides separate functionalities for students and club administrators. Students can create an account, log in securely, complete their profile, browse available events and activities, and view detailed information such as the organizing club, location, date, time, required skills, and activity description. They can register for suitable events directly through the application and track the status of their registrations through the My Activities section. Once registered, students can participate in the activity and maintain a record of their completed events. Their profile can also contain their department, year, skills, interests, and achievements.

Club administrators can use the platform to create and manage events and activities. They can provide details about upcoming events, specify the number of participants required, mention required skills, and manage registrations received from students. Club admins can review registrations and accept or reject participants based on their requirements. This helps

organizations reduce manual work and maintain better records of their activities.
